- Etc.

Strong and safe heatproof board for fireplace enclosures

SkamoEnclosure Board is a light-weight, non-combustible building board that simplifies the construction process by eliminating the need for a steel or wood wall construction.

The result is a complete system for your fireplace enclosure with many design solutions and finishing possibilities.

1. Application knowledge

2. Design

3. Prototype

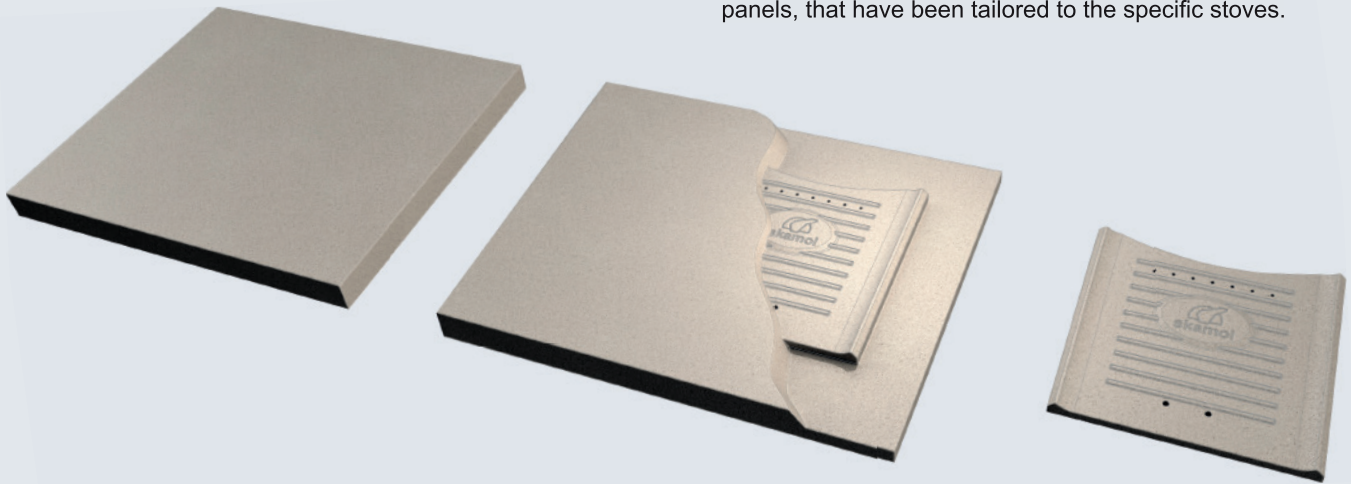

SkamoStove: Inside the unit

Complete system for your needs

- Standard boards
- Design panels
- Customised shapes

You can get competitive advantage with SkamoStove

The SkamoStove insulates the stove and increase combustion temperature, which provides a cleaner burning process and a more efficient use of the wood. The SkamoStove system portfolio ranges from a wide variety of standard boards and design panels to customised panels, that have been tailored to the specific stoves.

All in one

- Our in-house technical experts support you with the right system specifications
- We can make the prototype to fit your demand
- We make proper tests with several quality checks during design of your solution
- We deliver uniform quality in our systems which secure your production
- With our 5 axis CNC work centers or custom mouldings, we can always fulfill your customized demands
- We have developed special packaging systems to fit your needs
- We deliver tailor-made systems every day

4. Test

5. Production

6. System delivery
